

**Project: Centre MK, MK Shopping Centre**

Architectural

These two striking kite structures proudly hang from tensioned wire ropes, in the North and South entrance atria at the iconic MK Shopping Centre. They are constructed from CNC laser-mitred aluminium tubular framework infilled with Locker's expanded metal Malin mesh.

Locker undertook the computer-modelled detailed design, complex 3D mitred welding.

The framework and mesh were grit-blasted and polyester powder coated Aztec gold.

The sculptures were a challenging puzzle to install however our skilled rigging team completed the work ahead of schedule over 21 continuous nights.

**Material:**  
Malin Expanded Metal
